and Health & Safety
Workshop

*Raising awareness
of OHS

Let **February** brings you the most favourite memories and days ahead. Hope you had enjoyed a very Happy Valentine's Day!

RecyGlo Got ISO 9001-2015!

Why ISO? ISO - International Organization of Standardization 9001 - 2015 drives us to have the professional platform of working qualities. The quality management of our own community should meet the requirements for the workforce, and formation of job descriptions. According to the international organization of standards, RecyGlo, our future working structure and waste management service have been modified and fixed with our customers' needs, and wants. Therefore, it is way more satisfied and supportive to have the loyal communities, companies which are applying our waste management, waste segregation and recycling service at the workplace, and home compounds. It is great to be with you!

Regional Movement Moves Forward Together for Same Long Lasting Result

Okka Phyo Maung

CMO/ CFO

“The industry is known for 3Ds (Dirty, Difficult and Dangerous). Consumers, enterprises and governments are demanding the change and solutions that can solve the biggest challenges of our time : Climate Change and Sustainability. For us, we tackle the waste management as part of the bigger portfolio of sustainability. We are creating circular economy and stopping the waste before they go into the Ocean. We believe that RecyGlo will be a truly regional platform for tackling waste management problem in South East Asia.”

Traditional Cook to E-cook

Indoor open fire cooking has over influenced our society for more than hundred years. Especially, in developing countries, including Myanmar, of course, it has affected and led to have deaths more than HIV/AIDS infected people. The health diseases from open fire cooking can cause cancer, respiratory illness, chronic obstructive pulmonary, etc.,. Since then, it is the hottest issue to be focused from now on for preventing and protecting for the indoor pollution by the kitchen, and RecyGlo Myanmar has been focusing on E-Waste to E-Cook for the rural area to have a healthy and hygienic living style. The impact and result can lessen the deforestation and consequences of health problems. So why no E-cook?

Environmental Leadership 3.0

“POLLUTANTS can be solved by ourselves.” Yangon is in harmful situation recently. Our EL 3.0 speakers, U Aye Thiha, Dr. Kyaw Swar oo, and Ma May Khine Phyo Shwe had discussed about “Indoor Pollutants, and Outdoor Pollutants” from their livelihood and working experiences. Gradually, we got the cherish and appreciation from Mizza, DVB, One News Myanmar media to share our sharp-witted perspectives from our audiences, and our panelists. The moment of the event had brought us to drive forward for growth in our own community, and country.

Child Protection and Health & Safety Workshop

5th of Feb, 2020
Phandeeyar

The workshop was hosted in Phandeeyar Co-working space on 5th of Feb, 2020 at 10am till 11:30am. It had been brought the bond of team spirit.. All the participants were our loyal clients, and partners, who have been working in dissimilar sectors in Myanmar for economic growth, and sustainable development. Throughout each activity from the workshop, we hope that all the forward footsteps in creating safe working space, environment, and manage the policy within organizations or companies for child labor policy would be improved.

Raising Awareness of Occupational Health & Safety

RecyGlo Myanmar had site visiting the factories, which we informed and contributed in developing working area policies, and labour management with Occupational Health and Safety policies, stated by RecyGlo. It was grateful to engage the communities which need the additional support depends on the country, and human development based for human capacity in our own working field. Our factory partners been sincerely participated with their effort, and look-forwarding movements in Myanmar for highlighted growth.
